zuhaibproo@gmail.com | +252 63 4541983 | [Github](#) | [LinkedIn](#) | [Portfolio](#) | Hargeisa, Somaliland

Summary

Full-stack developer experienced in building scalable web applications using Next.js, React, Node.js, and Go. Skilled in developing secure backend systems, REST APIs, authentication, and responsive user interfaces. Built real-world projects including student management, social media, and donation platforms with modern development practices.

Education

University of Hargeisa

B.S. Computer Science

October 2022 - Present

- Focused on software engineering, web development, and system design; built multiple full-stack projects using modern technologies.

Skills

- **Languages:** JavaScript, TypeScript, Go (Golang), Python
- **Frontend:** React, Next.js, Redux, Zustand, Context API, Tailwind CSS, Sass
- **Backend:** Node.js, Express.js, Gin, Socket.IO
- **Databases:** PostgreSQL, MongoDB, SQLite, MySQL, Redis, Neon
- **Tools & Platforms:** Git, GitHub, Postman, VS Code, Vercel, Render

Experience

Full-stack Developer

Tacab College

October 2025 – March 2026

- Developed a full-stack Student Management System with exam and payment management features
- Implemented secure authentication using hashed passwords, JWT, refresh/access tokens, and role-based access control (Super Admin, Admin, Registration, Student)
- Built password recovery system with email reset links and secure credential updates
- Developed Excel bulk upload with automated data extraction, student classification (IT/Basic), and grade calculation
- Designed student management modules (CRUD, academic records, and payments tracking)
- Created student portal for viewing results, payments, subjects, and updating credentials
- Built admin and payment management systems with role-based controls and financial tracking
- Implemented analytics dashboard with charts and statistics for academic and financial insights
- Designed responsive UI for admin and student interfaces.

Full-stack Developer

Xalkadoon Hackathon

December 2025 – December 2025

- Built a geospatial decision-support system for optimal dam location selection in Somaliland
- Processed terrain data (elevation, slope, valleys, precipitation, water flow) to identify high water accumulation zones
- Developed a cloud-seeding feasibility model using 16 environmental conditions with confidence scoring
- Designed system logic for water flow analysis in highland and lowland regions
- Collaborated in a fast-paced team, delivering a working prototype under strict time constraints
- Strengthened problem-solving, teamwork, and rapid prototyping skills

Projects

GiveFlow - Donation & Crowdfunding Platform ([View on GitHub](#))

Full-stack Web Application

- Built a modern donation and crowdfunding platform to connect users with causes in need
- Developed a responsive and user-friendly UI using Next.js, TypeScript, and Tailwind CSS
- Implemented authentication system with JWT, user profiles, and secure session handling
- Designed advanced cause discovery features including search, filtering, and sorting (by urgency, popularity, and funding goals)
- Enabled social engagement features such as liking and saving causes for later support
- Integrated anonymous donation functionality to support user privacy
- Implemented real-time donation progress tracking for transparent funding updates
- Built admin-controlled approval system to verify and publish new causes before they go live
- Managed API communication using Axios and React Query for efficient data fetching and state management

Tech Stack: Next.js, TypeScript, Tailwind CSS, Node.js, Express.js, JWT, Axios, React Query

SocialPulse - Modern Social Media Platform ([View on GitHub](#))

Full-stack Web Application

- Built a modern social media platform for content sharing, user interaction, and community engagement
- Developed a responsive and accessible UI using Next.js, Tailwind CSS, and ShadCN UI components
- Implemented secure authentication and user management using Clerk
- Designed core social features including posts with text and media uploads, likes, comments, and user interactions
- Built follow/unfollow system enabling users to connect and view personalized content feeds
- Integrated real-time notification system for likes, comments, and follows
- Developed user profile system allowing profile customization and exploration of other users
- Implemented image upload functionality using UploadThing for seamless media handling
- Designed and integrated PostgreSQL database using Neon for scalable data management
- Added dark/light theme support and fully responsive UI for all devices

Tech Stack: Next.js, Tailwind CSS, ShadCN UI, Clerk, UploadThing, Neon (PostgreSQL)
